

Universal Garage Door Remote Control

Model G6KR

1. INTRODUCTION

Congratulations on your purchase of the Skylink® G6KR Universal Garage Door Remote Control. This is a kit with a universal keypad transmitter and Smart Button™. Simply replace the traditional wall button by the Smart Button™, that's all for the installation. In this kit, you will find the following:

2. INSTALLATION

WARNING Unplug the power cord of your garage door opener before installation to ensure power is not connected.

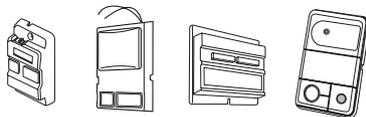

GTR Smart Button™

The GTR Smart Button™ replaces most garage door “push buttons” or “wall consoles”. There are 2 different kinds of “push buttons”.

1) Single button

2) Multi-Function Wall Console

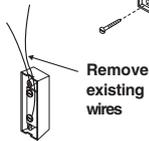

1) Single button

If your garage door opener comes equipped with a single button “push button”, you can replace the existing push button with Skylink® Smart Button™ GTR. Please follow the procedures below.

1. Remove the existing push button by removing the screws.

2. Disconnect the 2 wires that are connected to the existing push button.

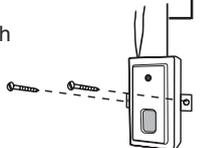

3. Connect the 2 wires from the existing wall button to the GTR Smart Button™. Twist the 2 wires together with the wire connector provided. Polarity does not matter, so simply pick one wire from the existing wall button, and connect it to one of the wires on the Smart Button™. Do the same for the 2nd wire.

4. After connecting the wires, mount the Smart Button™ on to the wall with 2 screws.

5. Plug in the AC cord of the garage door opener. The red light on the Smart Button™ should flash 15 seconds after plugging in the power. The red light will not flash immediately after plugging in the power, which is normal. The Smart Button™ is now ready to be operated.

Note: Straighten up the antenna to improve signal reception.

2) Multi-Function Wall Console

Multi-Function Wall Console normally comes with 3 buttons that can be used to:

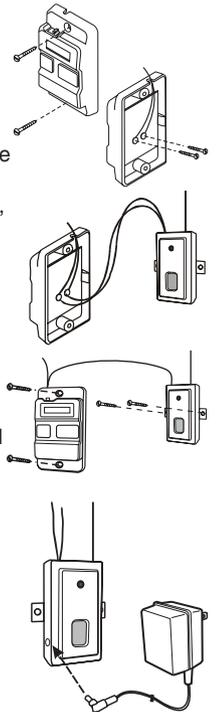

- 1) operate the garage door opener lighting,
- 2) lock the receiver so it doesn't accept remote control operation, and
- 3) push button for door opening / closing

2. INSTALLATION (CONT)

If you have the multi-function wall console, do not replace the wall console by the Smart Button™. You need to install the Smart Button™ in parallel with your existing wall console.

1. Remove the existing wall console from the wall by removing the screws.
2. Remove the 2 screws that secure the wires on the wall console.
3. Connect the wires from the Smart Button™ to the existing wall console. Polarity does not matter, so simply pick one wire from the Smart Button™, and connect it to one of the terminals on the existing wall console. Do the same for the 2nd wire.
4. After connecting the wires, mount the Smart Button™ on to the wall with 2 screws. Also mount the original wall console on to the wall.
5. Plug in the AC cord of the garage door opener. The red light on the Smart Button™ should flash 15 seconds after plugging in the power. The red light will not flash immediately after plugging in the power, which is normal. The Smart Button™ is now ready to be operated.
6. If the Smart Button™ red light does not flash at all 2 minutes after plugging in the AC cord, your garage door opener is probably too old. However, the Smart Button™ will still work by plugging in an adapter (purchase separately). Please contact Skylink® to purchase the adapter.

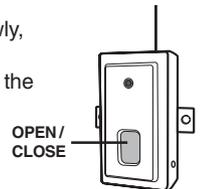

Rating of the transformer: 12V DC, 100mA Diameter of DC plug : 3.5mm

Note: Straighten up the antenna to improve signal reception.

3. OPERATION

If the red light on the Smart Button™ is flashing slowly, that indicates it is in standby mode. When a valid remote control signal is received, it will open / close the garage door.

Simply press the button on the Smart Button™, it will open / close the garage door.

Note: After connecting this NEW Remote Control to your wall button, your existing remote control will still work with this connection.

Skylink has 2 keypad version to work with the Smart Button™. If the keypad model is marked “S89” or “G5K” on the back of the unit, please follow the instruction below.

- Operation

Press [PIN] , [#] To open or close garage door, press your four digit PIN and the [#] key. If confirmed, the keypad transmitter will emit three beeps.

Default PIN is 0000.

Press [0000][#] to open the garage door.

If you do not hear 3 beeps after the 4-digit PIN and [#] is entered, that means you have entered an incorrect PIN, and the Model G5K or S89 will not operate your garage door.

3. OPERATION (CONT)

- To change your PIN:

1. Enter the current PIN, (currently set at 0 0 0 0), press * ,
2. Enter new 4 digit PIN, press * ,
3. Enter new PIN again, press * .

For example, if you are changing the PIN number from 0000 to 1234, enter the following sequence, 0000, *, 1234, *, 1234, * .

If confirmed, the backlit LED flashes and the unit emits a long beep.

If the keypad model is marked "G6K" on the back of the unit, please follow the instruction below.

The keypad transmitter G6K can operate up to 4 Smart Button™ units, that also means one keypad transmitter can operate up to 4 garage door openers. Same PIN will be used for all doors. The factory default password is [0 0 0 0].

To operate door 1, you will enter [0 0 0 0][#][1]

To operate door 2, you will enter [0 0 0 0][#][2]

To operate door 3, you will enter [0 0 0 0][#][3]

To operate door 4, you will enter [0 0 0 0][#][4]

To program the keypad transmitter into the Smart Button™, you must decide which door you need to operate. If you only have one Smart Button™, we suggest you to use door 1. i.e. [0 0 0 0][#][1].

If you do not hear 3 beeps after entering the PIN, i.e. [0 0 0 0][#][1], that means you have entered an incorrect PIN, and the keypad transmitter will not operate your garage door.

Follow the instructions below to change the PIN.

To change your PIN:

1. Enter the current PIN, (factory default PIN 0 0 0 0), press * .
2. Enter new 4 to 6 digit PIN, press * .
3. Enter new PIN again, press * .

For example, if you are changing the PIN number from 0000 to 123456, enter the following sequence, 0000, *, 123456, *, 123456, * .

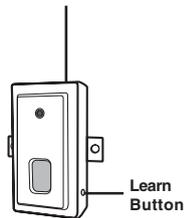

If confirmed, the backlit LED flashes and the unit emits a long beep.

Programming

Learn additional remote controls

Smart Button™ can learn up to 15 remote controls. To learn additional remote controls, follow the instructions below:

1. Press the learn button on the side of the GTR.
2. Once the learn button is pressed, the LED will flash quickly. You may release the learn button.
- 3a. If the keypad model is "S89" or "G5K", enter [PIN] [#] on the keypad transmitter you would like to program.
- 3b. If the keypad model is "G6K", enter [PIN][#] [assigned number of door] on the keypad transmitter you would like to program. The assigned door number can be either 1, 2, 3, or 4.
4. Once the keypad transmitter is programmed, the LED will flash slowly, in the same way as it flashes in standby mode.
5. You may now operate the garage door opener with this new keypad transmitter.

Erase remote controls

To erase unwanted remote control(s), first erase all remote controls, then learn the ones you would like to keep.

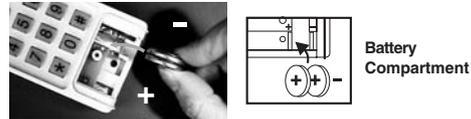

3. OPERATION (CONT)

To erase remote control(s)

1. Press and hold the learn button for approx 10 seconds.
2. The LED will flash rapidly after 10 seconds to indicate all the programmed remote controls have been erased. You may now release the learn button.
3. You have erased all the remote controls in the Smart Button™.

4. BATTERY

Two 3 volt Lithium type (CR2032) batteries (included).

It is time to change the batteries when the backlight no longer appears.

5. ADDITIONAL TRANSMITTER

You can add up to 15 additional transmitters to control the same receiver. Skylink® offers Keychain Transmitters and Visor Transmitters to work with your receiver. For more information, please visit our website at www.skylinkhome.com or contact us.

6. WARNING

DO NOT let children use the garage door transmitter without adult supervision. Children can injure themselves or others by the garage door.

7. FCC

The Garage Door Remote Control is approved by the FCC and it complies with Part 15 of the FCC Rules. Its operation is subject to the following two conditions :

1. This device may not cause harmful interference.
2. This device must accept any interference that may cause undesired operation.

WARNING:

Changes or modifications to this unit not expressly approved by the party responsible of compliance could void the user's authority to operate the equipment.

8. WARRANTY

If, within one year from date of purchase, this product should become defective (except battery), due to faulty workmanship or materials, it will be repaired or replaced, without charge. Proof of purchase and a Return Authorization are required.
